## **WiFi Router Administration & Access**

Last updated on April 25, 2022 by Yves Hoebeke

### A. How to access the router:

1. *Be within range of the router.*
2. *Open your browser and go to: **192.168.0.1***
3. *Enter **admin** as User name.*
4. *Password is **Beth&Wormy***
5. *Now you can set and modify WiFi parameters such as changing passwords, changing your network name (SSID), etc. ... .*

### B. Company Access (2.4G):

1. *Network: **DG1670A92***
2. *Password: **DG1670A9E9A92***

### C. Customer Access (5G):

1. *Network: **Ducky's Dockside***
2. *Password: **dockside***

Note: 5G access made public to allow bandwidth accommodation for a greater number of requests from the customers. The company access (2.4G) should be more than ample to allow a relatively smaller group to attain the throughput required.
